SUMMARY

Senior Frontend Engineer with **3.5+ years** of experience building high-performance, accessible ecommerce experiences using **React.js**, **Astro.js**, and **Next.js**. Deep expertise in **multi-tenant storefronts**, **personalization (Personify)**, **experimentation (VibeLabs)**, **A/B testing**, **observability for large-scale sales (Black Friday)**, and **edge rendering / island architecture**. Proven track record migrating and optimizing large codebases, delivering production personalization services, and leveraging AI-assisted developer tools (GitHub Copilot, ChatGPT) to accelerate delivery.

EXPERIENCE

Senior Software Engineer, THG

May 2024 - Present

- Led frontend development and platform work for multitenant ecommerce storefronts using **Astro.js**, **Next.js**, **React**, **Tailwind CSS**, optimizing accessibility, SEO and performance.
- Migrated **10+ beauty & luxury commerce sites**, delivering measurable improvements to TTFB/TTI, SEO and maintainability.
- Built a custom rendering/service layer to enable **dynamic, personalized ad/content delivery** integrated with **Google Tag Manager (GTM)**; resolved legacy integration issues and **doubled ad revenue** from personalized campaigns.
- Upgraded large-scale services (React 16 **React 18**, MUI Core v5) and refactored legacy class components to modern functional patterns, improving stability and developer velocity.
- Owned frontend integration and productization to securely drive real-time personalization, recommendations and targeted offers across multi-tenant sites. Implemented server-side fetching, client hydration, data-mapping layers, SDK-style hooks, privacy-compliant fallbacks and edge caching strategies.
- Designed experiment instrumentation, feature-flag patterns, adjudication flows, and experiment dashboards consumed by marketing/data teams to accelerate hypothesis-to-production.
- Built dashboards, real-user monitoring (RUM), synthetic checks, alerts and runbooks for sale events (Black Friday). Led load testing and spike-protection strategies to ensure resilience and rapid incident response.
- Leveraged **AI-assisted tooling** (GitHub Copilot, ChatGPT, Claude) for prompt engineering, component scaffolding, and faster debugging; mentored team on adoption best practices.
- Mentored junior engineers and led cross-functional collaboration with data, design and marketing to deliver product-driven features.

Software Engineer, Coditas Solutions

Jul 2022 - May 2024

- Built responsive web applications using **React** and **Next.js**, authored reusable UI component libraries (Tailwind, MUI, Chakra), and improved cross-browser compatibility and performance.
- Implemented performance improvements (code-splitting, lazy loading), comprehensive testing (Jest, React Testing Library), and CI/CD best practices.
- Participated in agile ceremonies and conducted peer code reviews to uphold engineering quality.

PROJECTS

Ecommerce Multitenanted Storefront

- Engineered a scalable platform supporting multiple beauty brands with custom themes and configurations per tenant.
- Leveraged Astro.js and edge-side deployment to improve site speed and reduce latency.
- Built dynamic, behavior-driven content delivery with SEO best practices for each tenant.
- Integrated analytics to support data-driven decisions and centralized management through a unified dashboard.

Hydrafacial

- Developed an interactive, map-based interface allowing users to locate nearby stores using geolocation and filters.
- Built a modular form component with dynamic validation logic based on API responses.
- Implemented a loyalty rewards feature enabling users to earn/redeem points and track purchase history.
- Created a privacy policy section with over 5 pages and implemented localization for 29+ languages using translation services.

Personify

- Developed workflow builder components with drag-and-drop interfaces for customer journey orchestration
- Implemented multi-channel campaign management for email, SMS, and push notifications
- Built dynamic audience segmentation tools supporting CSV uploads, expression queries, and combined logic
- Created reusable UI components and widgets for email template customization
- Integrated real-time analytics and campaign performance tracking dashboards

THG VibeLabs

- AI-Powered E-commerce Content Engine - Winner, THG India AI Hackathon 2025
- Developed AI-powered content engine leveraging Large Language Models (LLMs) to automate SEO-friendly product title and description generation for e-commerce platforms

- Implemented theme-based email campaign generation system with intelligent content personalization based on customer segments and product categories
- Built advanced image editing pipeline for automated product image background removal, contextual content overlay addition, and 360-degree product view creation
- Created product video generation module for automated advertisement content creation, reducing content production time by 80%
- Integrated intelligent prompt improvement capabilities using NLP techniques to optimize AI-generated content quality and relevance

EDUCATION

Bachelor Of Engineering, Computer Engineering
Snjb's KBJ College Of Engineering, Chandwad

Aug 2018 - Jun 2022
GPA: 9.14

SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3
Frameworks & Libraries: React.js, Astro.js, Next.js, Redux, Recoil, Tailwind CSS, SCSS, MUI, Chakra UI, Jest, React Testing Library, React-Hook-Form, Formik, Yup, Styled Components, React Bootstrap
Backend & APIs: Strapi, Firebase, REST APIs
Dev Tools & Platforms: Git, GitHub, GitLab, VSCode, Google Tag Manager (GTM), Agile, Scrum, JIRA, ProofHub
AI Tools: ChatGPT, Claude, Gemini, Grok
AI Coding Tools: GitHub Copilot, Roocode, Claude Code CLI, Codex CLI
